

CFM Series

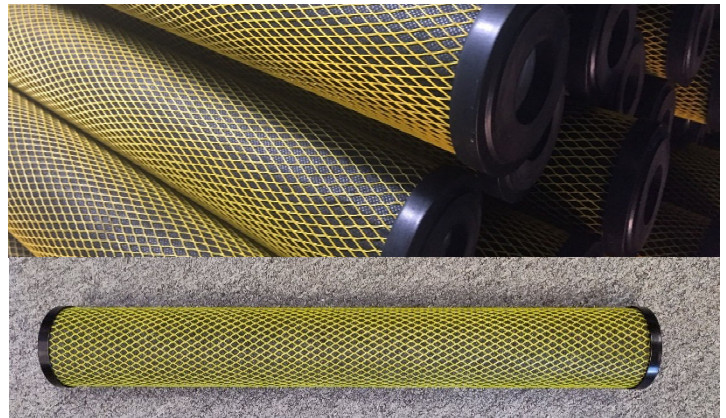

Activated Carbon Fiber Matrix Filter Cartridge

Delta Pure Filtration CFM Series Carbon Fiber Filter Cartridges are designed to remove organic compounds, hydrocarbons, chlorine, color, and odors from aqueous and organic liquids and gasses. This design of the carbon media is designed to maximize flow and contaminant removal without carbon being released into the system.

The CFM is made of high efficiency absorption activated carbon that uses a hollow framework as the support and multiple pre-filtration design

The CFM provides low pressure drop and is non-toxic, tasteless, acid resistant and alkali resistant.

These activated carbon filters come in multiple sizes to fit your common housing needs. Filter size can be customized to specific needs. CFM Filter Cartridges contain no binders or adhesives.

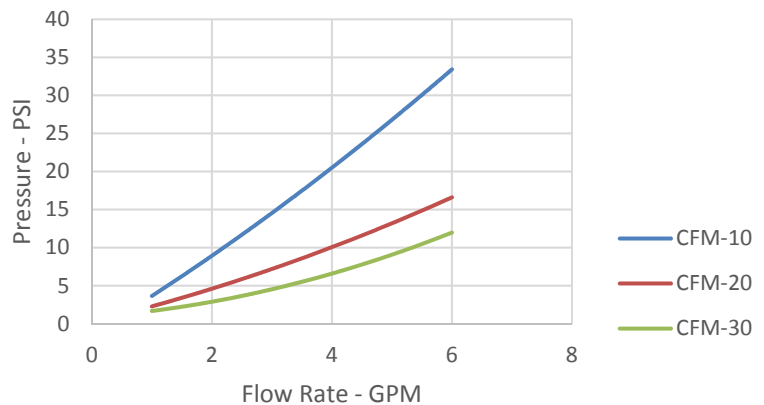

CFM Series filters

Main parameters of these filters are:

- 5 nominal micron rating
- 2.5" OD to fit in standard housings
- 1.1" ID to fit in standard housings
- Working temperature of 32-185F (0-85C)
- Unique bayonet end cap connection design
 - the end cap will not fall off

CFM 10, 20 & 30 Filters

Ordering Information

CFM-

10	10" length filters
20	20" length filters
30	30" length filters

Benefits

Maximizes flow and contaminant removal with the release of carbon fibers

Multiple lengths for various filter housings

Technical support and prompt deliveries

No leakage or contamination of liquid

Designed to fit in most single and multi-round housings

Applications

Water Filtration

Water Purification

Electroplating

High-precision electronics

Food & beverage

Drinking water
